Image alt text

CHECK

Measured: 3 of 42 images without usable alt text (7.1%): 0 without attribute, 3 empty

A minority of images carries no alt text. Every missing alt text is a lost image-search entry and an accessibility defect (WCAG 2.1 / ADA exposure for US clients). Screen readers announce nothing, so visually impaired visitors - and crawlers - see gaps.

Recommended fix: Add descriptive alt text to every content image; decorative images get alt="".

Page size (HTML)

ISSUE FOUND

Measured: 1602.3 KB of HTML (threshold 400 KB) with 31 scripts, 0 stylesheets and 42 images referenced

A heavy HTML document delays the first paint, most of all on the mobile connections used by people searching for an emergency repair. Slow pages lose visitors before the phone number is visible, and Core Web Vitals are a ranking factor.

Recommended fix: Split oversized inline CSS/JS into cached files, drop unused page-builder code, compress and lazy-load images.

Accessibility (WCAG 2.1 AA): Heading levels should only increase by one

How this audit was made

The page was loaded once as a normal browser request and analysed in its delivered state (no CMS login, no JavaScript executed unless the request had to fall back to a rendering service). All values above come from that single response; they are reproducible. Assessment date: 2026-09-25. Page-size numbers cover the HTML document only, external assets excluded.

Next steps

- Fixes are implemented page-by-page; the highest-impact items (Page size (HTML)) go first.
- After the fix we re-run this exact measurement set and hand over the before/after numbers.

- Structured data and meta descriptions are also submitted to Google Search Console so the rich results actually appear.
- Questions or the raw measurement file: hello@apex-data.io
